

# Home Learning Ideas

## Summer 2

We really enjoy sharing home learning as it is a great way for the children to explore the learning further, share their learning with you at home and demonstrate their independent skills. This half term, we are covering Science, Geography and Art. Here are some ideas that could spark the children's imagination but please only use these as ideas:

- Learn about different rocks and fossils, and maybe even go fossil hunting!
- Discover the life of Mary Anning and create a fact file about her, including why her discovery was and still is so significant
- Having collected different rocks, experiment with them- what can you discover about the properties of different rocks?
- Explore how fossils are formed and create a set of instructions to explain this process
- Research local coastal areas and explain why they are so famous
- Draw an image of local coastal features, labelling and describing how they form
- Visit local coastal areas and create a collage of pictures that you take
- Practise printing with different objects and note the different shapes and textures they create
- Look at artwork showing different landscapes and create your own picture
